

PC-Doctor Service Center™ 7

The **#1** most trusted PC service & repair solution worldwide

PC-Doctor Service Center 7 (SC7) uses the same diagnostics as 4 of the world's top 5 PC manufacturers to increase your testing accuracy, troubleshooting efficiency, and professional image. After identifying hardware issues using the PC-Doctor diagnostics and completing repairs, SC7 verifies that the problems are no longer present. The reports you generate for your customers will include your logo, contact information, and technician's name, as well as a complete system inventory that includes model and serial numbers, every test you ran on the system, and the action you took to fix the problem.

The Service Center Advantage

SC7 significantly advances the capabilities of the PC diagnostic kit that repair depots, manufacturers, independent computer repair shops and other professionals have used for years to troubleshoot hardware issues. In addition to updated diagnostics, the new kit delivers faster testing, a significantly improved POST card, and the ability to take detailed snapshots of the system under test to clearly show all changes made to hardware and drivers. You can present a professional image to your customers by providing customizable reports that include your company's logo and contact information.

- The included power supply tester, POST card, network tester, and loopbacks help you find problems fast
- Bootable Multipurpose USB Device indicates test status and stores configuration files, customizable reports, system snapshots, your customized links, and other information
- Fully re-designed and enhanced user interface makes testing easy
- Direct System Information™ architecture gathers information directly from devices, bypassing drivers where possible
- Runs under Windows Vista, XP, Server 2003, 2000 and the included offline bootable OS
- Multiple boot options:
 - o Hard drive
 - o CD
 - o Multipurpose USB Device
- Documentation now includes an advanced user guide with 200+ pages of detailed test descriptions, instructions, and tips

- Free referrals - the only repair product supported by a technician database that refers customers to you

Save Time, Money, Increase Service Quality

SC7 is used by professional PC technicians, managed service providers, repair centers, computer retailers, enterprise IT organizations, low-volume manufacturers, system designers and serious hobbyists.

Save time, save money, and increase your product or service quality by using SC7 to accurately diagnose hardware problems, to ensure component quality and functionality, and to provide the most extensive system information available.

The Leading PC Diagnostic Repair Kit

The computer hardware diagnostic tests included in PC-Doctor's SC7 allow professional technicians and system builders alike to find quick, accurate solutions to computer problems.

If you have a PC repair business or offer PC repair services, the PC diagnostics in SC7 provide professional reports to cut your test time in half, to help explain problems and solutions to your customers, and to help improve your professional image.

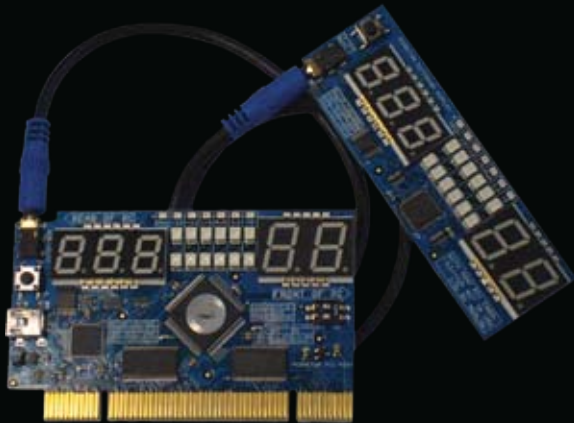

866-289-7237

“PC-Doctor, your product is amazing. It saves my company time and money when we are at a client site and need to know what is wrong with a piece of hardware. It is a must have tool for anyone who troubleshoots PC hardware.”

- Bryan Guinn, CEO, Prism Technologies Group

New PCI POST Card

The new PCI POST card included in the kit has a companion display on a flexible connector, making it easy to read the status on a remote display.

The POST Card verifies the integrity of your power supply connections when the system executes the Power On Self Test (POST). The POST Card also displays the clock speed of the PCI bus as well as voltage readings.

The POST Card displays codes that indicate what the system BIOS is doing prior to loading the operating system. If the system fails to boot, the last POST code from the BIOS is shown on the 2-digit LED display, pinpointing the operation that failed.

Diagnose Unbootable Systems

Boot and test from the included CD or Multipurpose USB Device or parallel port device (for legacy systems) — even if the installed OS and/or hard drive are dead/non-existent.

Diagnose the Latest Components

- New test coverage includes new video tests, Bluetooth tests, additional CPU tests, Blu-ray testing, up to 64 GBs of memory, and much more!
- Available updates keep your testing current

Solve Intermittent Problems

Run the system load test and parallel tests to stress the system and expose intermittent problems.

Kit Contents

The comprehensive SC7 kit includes:

- Diagnostic CD for both Windows and low-level hardware testing in the included offline diagnostic OS
- CD and DVD test media
- Drive Erase Tool (performs to DoD specifications)
- Four loopback devices for RJ45 ports, serial, audio, and parallel ports
- NEW PCI POST card
- Power supply tester
- Multipurpose USB Device bootable to the offline OS for low-level testing and parallel port device for legacy systems and 128 MB of storage
- Quick Start Guide
- Comprehensive documentation for advanced product usage
