

PC-Doctor Service Center™

Service Center 17 provides the same PC-Doctor diagnostic tools used by the world's top original equipment manufacturers to increase testing accuracy and troubleshoot more efficiently. Use Service Center to identify hardware issues—even intermittent ones—then complete your repairs and verify that problems no longer exist. Service Center generates professional reports for your customers with your logo, technician and contact information, list of tests performed, and actions taken to fix issues, as well as a complete system inventory that includes system model and serial number.

The Service Center Advantage

Service Center 17 significantly advances the capabilities of the PC, Android, Chrome OS and Intel-based Mac diagnostic kit used for years by repair depots, manufacturers, computer repair shops and other professionals to troubleshoot hardware issues—now with Apple silicon “M” series support! Each new release brings the most comprehensive diagnostics and system information in the industry, enhanced to cover the latest hardware, platforms and chipsets.

Service Center 17 provides five great diagnostic environments on a single USB key, allowing technicians easy access to test environments in Windows, Chrome OS, macOS, and Bootable Diagnostics—with Intel-based Mac and Android support. Snapshots that provide details of system changes can be included in Service Center's customizable reports, along with the system serial number, your company logo, and helpful reporting information.

Diagnostic sessions from all four testing environments are easily combined on the USB key to give your customer a complete picture of testing performed. The Multipurpose USB Device stores configuration files, customizable reports, system snapshots, your customized links, Drive Erase reports and other useful information.

- Direct System Information™ architecture that gathers information directly from PCs, bypassing drivers where possible
- Ability to run under Windows, macOS, Chrome OS, Android, and the offline Bootable Diagnostics operating system
- Bootable Diagnostics support for “legacy free” UEFI based systems that do not support testing in BIOS-dependent operating systems, such as DOS

- PC-Doctor Drive Erase is certified as NIST-800-88r1 Compliant for media sanitization with customized reports, ensuring one of the most accurate and comprehensive drive erasure available
- Loopbacks to verify audio, network, and legacy serial and parallel ports
- Documentation that includes a comprehensive user guide with detailed test descriptions
- Integrates with Service Center Remote for cloud based reporting and optional remote diagnostics
- Customer reports available in English, Danish, Finnish, French, Norwegian, Portuguese and Swedish
- Free referrals—the only repair product supported by a technician database that refers customers to you

The Leading Hardware Diagnostics Repair Kit

Service Center is used by ITAD professionals, repair technicians, managed service providers, repair centers, computer retailers, enterprise IT organizations, low-volume manufacturers, system designers and serious hobbyists.

Cloud Reporting

Now included is the ability to store diagnostic reports in the cloud! Service Center integrates with Service Center Remote to store customer reports online, allowing you and your team easy access to them from any device.

To learn more about Service Center Remote and the optional remote diagnostics visit www.pcdremote.com.

Save Time and Money While Increasing Quality

Accurately diagnose hardware, ensure component quality and functionality, and obtain the most extensive system information available—saving you time and money while increasing your product and service quality.

Diagnose Unbootable Systems

Boot and test from the included Multipurpose USB Device—even if the installed OS and/or hard drive is dead/non-existent. Use Bootable Diagnostics to access an offline Linux test environment, complete with proper driver support that helps cover all devices on the system, not only those with UEFI drivers.

Solve Intermittent Problems on a PC

- Run the system load test and parallel tests to stress the system and expose intermittent problems
- Use System Events to view when a BSOD occurs, as well as the device and driver that caused it

Diagnose the Latest Components

- Industry standard diagnostics and system information tools are continuously enhanced to cover the latest hardware, platforms and chipsets
- Windows, Bootable Diagnostics, macOS, Chrome OS, and Android diagnostics cover all testing environments
- Additional sensor support for mobile device testing
- Testing in UEFI and non-UEFI environments
- Full support for Windows 11, Android 14 and 15, and macOS 15!

Service Center Includes

- Multipurpose USB Device containing PC, Mac, Chrome OS, and Android test environments
- CD and DVD test media
- Four loopback devices for RJ45, serial, parallel, and audio ports
- USB-A to USB-C adapter, USB-A extension cable
- PC-Doctor Drive Erase (included with the offline Bootable Diagnostics)
- Comprehensive documentation for advanced product usage
- A professional case for carrying the kit onsite
- Free cloud reporting with optional remote diagnostics
